An underbench washer disinfector is a compact, efficient cleaning and disinfecting machine designed for use in environments with limited space, such as smaller healthcare facilities, clinics, or laboratories. Installed beneath a counter or bench, it combines washing, disinfecting, and drying processes in a single, streamlined unit. Typically used for cleaning and sterilizing laboratory glassware, surgical instruments, and other small medical devices, the underbench washer disinfector operates by using high-pressure water jets, detergents, and disinfectants, often combined with thermal disinfection (steam or hot water) to ensure thorough decontamination. These units are especially valuable in spaces where a full-sized washer disinfector might not be feasible, offering a space-saving, cost-effective solution while still meeting stringent hygiene standards.
