## Abstracts

The global Undercarriage Components market size is expected to reach \$ 11030 million by 2032, rising at a market growth of 6.8% CAGR during the forecast period (2026-2032).

Undercarriage is a section in a vehicle that lies beneath the main body of the vehicle. For different automobiles, undercarriages differ along with their parts called as undercarriage components. Various undercarriage components such as track rollers, track chains, idlers and sprocket, track shoes and bushings are used across industries including mining, construction and agriculture & forestry. They are used in undercarriages of earth moving equipment such as crawler excavators, dozers, mini excavators, compact track loaders and crawler cranes.

Global Undercarriage Components main providers include Topy Industry, Thyssenkrupp and XCMG etc. The top 10 companies hold a share over 43%. Asia Pacific is the largest market, with a share about 46%. As for the types of products, it can be divided into track chains, track roller or carrier roller, track shoes, sprockets and segments and idlers and tension groups. The most common type is track chains, with a share over 32%. In terms of application, it is widely used in construction, mining, agriculture and forestry and others. The most common application is construction, which accounts for about 60% of all.
