Abstracts

According to our (Global Info Research) latest study, the global Underground Belt Conveyor market size was valued at US\$ 1960 million in 2025 and is forecast to a readjusted size of US\$ 2830 million by 2032 with a CAGR of 5.4% during review period.

In 2025, global sales of underground belt conveyors reached 6,800 units, with an average selling price of US\$280,000 per unit. Underground belt conveyors are continuous material conveying equipment used in coal and metal mines. They consist of a drive unit, conveyor belt, idler rollers, frame, tensioning device, and electrical control system. They enable long-distance, high-capacity, continuous transportation of coal or ore in narrow tunnels and complex geological conditions. They feature high conveying efficiency, high automation, stable operation, and convenient maintenance, making them one of the core pieces of equipment for achieving intelligent and unmanned production in modern mines. The industry's total capacity is approximately 8,000 units per year, with an average gross profit margin of approximately 22%. Upstream raw materials mainly include high-strength steel, motor reducers, flame-retardant conveyor belts, and electrical control components; downstream customers are mainly coal companies and metal mining companies, with supply and installation handled through mining equipment integrators and EPC contractors. The future lies in the integration of intelligent monitoring systems, the upgrading of energy-saving driving technologies, and the development of ultra-long-distance, high-capacity transportation products. With the upgrading of global mining mechanization and the improvement of safety and environmental protection standards, market demand continues to grow steadily, and companies with system integration and intelligent solution capabilities will gain more business opportunities.
