Abstracts

The global Underground Hard Rock Drill market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The underground hard rock drill is a kind of equipment used for mining and tunnel operation, which is used to drill into the hard rock surface. It is designed to operate in a challenging underground environment where access and visibility may be limited and conditions may be dangerous. Hard rock drilling rigs are available in various sizes and configurations, from hand-held models to large drilling rigs. They usually use diamond or tungsten carbide bits to drill into rock and are driven by electric, hydraulic or pneumatic motors. Some drilling rigs can also install dust collection systems to reduce the amount of air particles produced during drilling.

This report studies the global Underground Hard Rock Drill production, demand, key manufacturers, and key regions.
