Abstracts

The global Underground Haul Trucks Tires market size is expected to reach \$ 1074 million by 2032, rising at a market growth of 4.2% CAGR during the forecast period (2026-2032).

Underground haul truck tires are engineering machinery tires specifically designed for underground mining transportation equipment. They typically feature small diameters, wide cross-sections, and high load-bearing capacity to adapt to operating environments with narrow tunnels, slippery surfaces, and high impact loads. They emphasize cut resistance, puncture resistance, and low heat buildup. Solid tires are used in some applications to avoid the risk of tire blowouts. Their price is relatively lower than open-pit mining truck tires. Pneumatic tires generally cost between \$1,000 and \$5,000 per tire, while solid tires or high-wear-resistant mining-specific tires can reach \$5,000 to \$15,000 per tire or even higher, depending on size, construction, and operating conditions.
