Abstracts

According to our (Global Info Research) latest study, the global Underground Mining Truck Engine market size was valued at US\$ 272 million in 2025 and is forecast to a readjusted size of US\$ 374 million by 2032 with a CAGR of 4.5% during review period.

Mining truck engines are compact industrial power units specifically designed for underground mining transport vehicles. They typically use low-to-medium power diesel engines or low-emission power systems, emphasizing small size, high torque output, and safe and stable operation in environments with limited ventilation, high temperature and humidity, and high dust levels. They must also meet stringent underground emission standards (such as low nitrogen oxide and particulate matter control). Their power output is generally in the range of 200?600 horsepower, significantly lower than that of open-pit mining truck engines. In terms of price, due to the high requirements for low emissions, safety certification, and compact structure, the price per unit is typically around US\$50,000?150,000, with some high-end low-emission or explosion-proof configurations costing even more. Overall, they belong to the low-to-medium power but high-tech segment of the mining engine market. Sales in 2025 were approximately 2,562 units.
