## Abstracts

According to our (Global Info Research) latest study, the global Underground Mining Ventilation Systems market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Ventilation is the control of air movement, its amount, and direction. Although it contributes nothing directly to the production phase of an operation, the lack of proper ventilation often will cause lower worker efficiency and decreased productivity, increased accident rates, and absenteeism. Underground mine ventilation provides a flow of air to the underground workings of a mine of sufficient volume to dilute and remove dust and noxious gases (typically NO<sub>x</sub>, SO<sub>2</sub>, methane, CO<sub>2</sub> and CO) and to regulate temperature. Ventilation is a complex and vital component of any underground mine.
