Abstracts

The global Underport Burner market size is expected to reach \$ 1151.4 million by 2030, rising at a market growth of 4.3% CAGR during the forecast period (2024-2030).

Underport burners are suitable for underport application into regenerative furnaces. They are designed to fire NG, LPG or propane at low gas supply pressure and are available in different size in order to fit any kind of application. The flame generated can be adjusted in length and mixing velocity and is extremely luminous thus enhancing the heat radiation effect of the flame to the glass. The Gas supply is separated into two independent gas streams so as to generate a fully adjustable Jet and Shroud patterns into the flame. Thanks to this characteristic the burners can be easily fitted with any kind of furnace geometry finding always the optimal working conditions.
