## Abstracts

The global Underwater Cleaner market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

An underwater cleaner is a device used to clean the surfaces of objects that are submerged in water, such as boats, swimming pools, and aquariums. It typically consists of a motor that drives a brush or other cleaning mechanism, which is attached to a long handle or wand. The cleaner may be powered by electricity or by compressed air, and may be designed for use in fresh water or salt water environments.

The upstream industry chain of the underwater cleaner includes the production of motors, brushes, and other cleaning components, as well as the manufacturing of the housing and handle. Downstream industries that make use of underwater cleaners include boat and shipbuilding, swimming pool maintenance, and aquariums.
