The global Underwater Escape Training Training Service market size is expected to reach \$ 774 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032).

Underwater escape training services are professional safety training services provided to personnel working in high-risk aquatic environments. Through simulating real underwater accident scenarios and conducting emergency escape drills in specialized training equipment, trainees master key skills such as remaining calm underwater, disarming safety devices, locating exits, using breathing equipment, and rapid evacuation. The core objective is to improve personnel's survival capabilities in extreme environments and meet industry safety standards and compliance requirements. A typical training system is HUET.

Underwater escape training services have a steady growth prospect. Their development is mainly driven by increased global investment in offshore energy, stricter safety regulations, and companies' increased emphasis on employee safety. As mandatory safety training standards in various countries continue to improve, relevant practitioners must receive regular certification training, creating a rigid demand. Meanwhile, emerging fields such as offshore wind power operation and maintenance and deep-sea engineering are also continuously expanding the training population. Furthermore, the introduction of virtual reality (VR), augmented reality (AR), and intelligent simulation equipment is improving training efficiency and safety, driving the industry towards high-tech content and standardized certification systems. It is expected to maintain stable growth in the future and exhibit regional concentration characteristics.
