## Abstracts

The global Underwater Mapping Service market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Underwater mapping service is a type of service that involves the use of various techniques and technologies to create detailed maps or models of the bathymetry (topography of the seafloor), underwater features and resources, and other underwater environments. The mapping can be done for a variety of purposes, such as navigation, scientific research, resource exploration, environmental monitoring, and engineering projects. Underwater mapping services typically involve the use of specialized equipment, such as sonar systems, multibeam echosounders, remotely operated vehicles (ROVs), autonomous underwater vehicles (AUVs), and other sensors and instruments to collect data and create accurate maps of the underwater environment. The resulting maps and models can provide valuable information to a wide range of industries, including marine transportation, oil and gas exploration, fishing, and oceanography.
