The global Underwater Non-Destructive Testing Service market size is expected to reach \$ 1052 million by 2032, rising at a market growth of 5.6% CAGR during the forecast period (2026-2032).

Underwater Non-Destructive Testing Service refers to the non-destructive inspection and assessment of marine engineering structures (such as platforms, pipelines, cables, hulls, dams, etc.) in an underwater environment, conducted by professional underwater inspectors or remotely operated vehicles. This service utilizes advanced technologies such as acoustics, optics, and electromagnetics (e.g., ultrasonic thickness measurement, underwater photography, magnetic particle testing, and potential measurement) to detect surface defects, corrosion, fatigue cracks, or internal damage without removing the structure or causing any damage. Its core purpose is to ensure the integrity, safety, and reliability of underwater assets, providing critical data for maintenance decisions, life assessments, and risk management. It is a vital preventative maintenance and safety assurance tool in fields such as offshore oil and gas, offshore wind power, maritime transportation, and water conservancy projects.
