## Abstracts

The global Underwater Nuclear Welding market size is expected to reach \$ 11861 million by 2032, rising at a market growth of 3.6% CAGR during the forecast period (2026-2032).

Underwater nuclear welding refers to welding operations performed in the underwater environment of nuclear power plant facilities. It is primarily used for in-service inspection, maintenance, and decommissioning of high-radioactive areas such as reactor pressure vessels and in-core components. The core advantage of this technology is that it allows for remote maintenance without draining the reactor water or removing nuclear fuel, thereby significantly reducing radiation exposure to personnel, shortening maintenance cycles, and saving substantial costs.
