According to our (Global Info Research) latest study, the global Underwater Passive Acoustic Recorders market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Underwater Passive Acoustic Recorders are devices used for recording and analyzing sounds and acoustic signals underwater. Passive acoustic recorders are typically submerged in bodies of water, such as oceans or lakes, to capture sounds produced by marine animals, underwater vehicles, or other sources of interest. These devices are designed to be autonomous and operate for extended periods, employing hydrophones to convert acoustic waves into electronic signals that can be recorded and analyzed later. They play a crucial role in marine research and conservation efforts, helping scientists understand underwater ecosystems and monitor the behavior of marine species.
