Abstracts

The global Underwater Propulsion Robot market size is expected to reach \$ 107 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032).

In 2025, global Underwater Propulsion Robot production reached approximately 57k units, with an average global market price of around US\$1.3k per unit.

An underwater propulsion robot is a subsea mobility platform built around electric propulsion—typically propellers, ducted thrusters, or vectored-thruster pods—to generate thrust and control attitude underwater. It can appear as a standalone thruster module, a propulsion “skid” carrying sensors and controllers, or an assist unit that boosts maneuverability, station-keeping, and short-range transport for subsea tools, small payloads, or diver-support applications. Core performance drivers include thrust-to-power efficiency, sealing and pressure integrity, corrosion resistance, low-noise operation, stable closed-loop control (depth/heading/attitude), and robust mechanical/electrical interfaces for integrating sensors, batteries, and mission payloads.

Upstream spans motors and drives (BLDC motors, ESCs/motor controllers), propulsors and rotating hardware (props/ducts, shafts, bearings), batteries and BMS, sealing and pressure-rated structures (O-rings, mechanical seals, housings), subsea connectors and cables, sensing/control electronics (IMU, depth/pressure, power monitoring), plus corrosion protection and structural materials (aluminum/titanium, engineering plastics, composites, coatings/anodes). Representative upstream suppliers include Maxon and FAULHABER (precision motors), Parker and Trelleborg (sealing systems), Teledyne Impulse and SubConn (subsea connectors), Panasonic and LG Energy Solution (Li-ion cells), and Toray (composites). Midstream players design and integrate complete

propulsion robots—thruster modules, control software, structures, and reliability testing—while downstream demand comes from offshore inspection/O&M (including wind), port and ship maintenance, ocean science and survey, security and search-and-rescue, and OEMs/service operators that embed propulsion and station-keeping modules into ROV/AUV and subsea tool systems; example downstream organizations include Fugro and Subsea7 (offshore services), Saab Seaeye and Deep Trekker (ROV platforms), and Kongsberg (marine systems/AUV ecosystem).

The annual production capacity of a single-line Underwater Propulsion Robot is approximately 2k unit, with a gross profit margin of approximately 25%-45%.
