Underwater strobes are high-intensity flash lighting devices designed specifically for underwater photography and videography, providing powerful bursts of light to illuminate subjects in low-light or deep-sea environments. These strobes compensate for color loss and poor visibility caused by water absorption and scattering, helping to restore natural colors and enhance image clarity. Typically attached to underwater camera housings via adjustable arms, they are waterproof, pressure-resistant, and often offer adjustable light output and fast recycling times. Underwater strobes are essential tools for divers, marine biologists, and professional underwater photographers aiming to capture sharp, vibrant images beneath the surface.
