Abstracts

According to our (Global Info Research) latest study, the global Underwater Vessel Repair Services market size was valued at US\$ 8265 million in 2025 and is forecast to a readjusted size of US\$ 11680 million by 2032 with a CAGR of 5.1% during review period.

Underwater Vessel Repair Services refer to comprehensive technical services that involve the inspection, cleaning, repair, and replacement of the hull, propeller, rudder system, and auxiliary structures of a vessel in an underwater environment, without requiring it to be docked or brought ashore. Core services include underwater inspection (UWILD), hull cleaning, propeller polishing and repair, structural welding, and leak sealing. These services rely on specialized diving equipment, underwater imaging systems, and non-destructive testing technologies to reduce vessel downtime and operating costs while ensuring safety and compliance.

The Underwater Vessel Repair Services industry has benefited from the growth of global shipping volume, the increasing size of ships, and shipowners' emphasis on operational efficiency and cost control, resulting in a steady increase in demand. In particular, against the backdrop of high fuel costs and increasingly stringent environmental regulations, the frequency of services such as underwater cleaning and propeller polishing has increased significantly. At the same time, with the development of unmanned technologies (ROV/AUV), underwater robots, and digital inspection methods, the industry is upgrading from traditional diving operations to 'human-machine collaboration + automation'. However, due to high safety risks, strict technical thresholds and qualification requirements, industry concentration is expected to increase, and the future development trend will be 'regional service networking + high-

end technology differentiation'.
