## Abstracts

The global Underwater Work Tools market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The driving factors for the development of underwater working tools mainly include the following aspects:

**Marine resource development:** The ocean is rich in minerals, energy, biological and other resources, which is of great significance to the development of human economy and society. Underwater operating tools are one of the key equipment for the development of marine resources, and their development is closely related to the development and utilization of marine resources.

**Technological progress and equipment upgrades:** The development of underwater working tools depends on technological progress and equipment upgrades. With the continuous application of new materials, new energy, new processes and other technologies, the performance and reliability of underwater working tools have been greatly improved. At the same time, technologies such as intelligence, autonomy, and remote control of underwater working tools have also promoted the upgrade of underwater operations.

**Market demand:** With the rapid development of the marine economy and the continuous deepening of the development and utilization of marine resources, the demand for underwater working tools is also growing. For example, in the mining process of offshore oil, natural gas and other fields, a large number of efficient and safe underwater working tools are needed to improve mining efficiency and reduce costs.

**Military applications:** Underwater working tools are also widely used in the military field, such as underwater submarines, underwater robots, etc. These equipment can perform tasks such as reconnaissance, detection, and destruction of enemy maritime facilities, and are of great significance to improving the country's maritime security and military competitiveness.

**Environment and ecological protection:** With the global emphasis on environmental protection and ecological sustainable development, the development of underwater working tools also focuses on environmental protection and ecological protection. For example, underwater robots can be used in the monitoring and protection of the marine environment, as well as underwater archeology and conservation, to provide support for environmental protection and ecologically sustainable development.
