Abstracts

Unfractionated Heparin (UFH) is a fast-acting blood thinner that works together with antithrombin, a natural protein in the body, to block clot formation. Specifically, UFH binds to antithrombin and enhances its ability to inhibit two of the body's most potent clotting factors – factor Xa and factor IIa – usually within minutes. As with all forms of heparin, UFH doesn't break down clots, but it keeps them from growing and stops new ones from forming. This allows the body the time necessary to gradually dissolve existing blood clots. Unfractionated Heparin Market can be divided by source (Porcine and Bovine), by Injection type (IV Injection and Subcutaneous Injection), and by disease indication (Venous Thromboembolism, Cardioversion of Atrial Fibrillation, and Pulmonary Embolism & Arterial Embolism).

According to our (Global Info Research) latest study, the global Unfractionated Heparin market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
