Uni-directional couplers have the advantages of low insertion loss, high coupling efficiency, and good stability. When selecting and using a uni-directional coupler, factors such as the operating wavelength, insertion loss, and coupling uniformity of the optical fiber need to be considered to meet the needs of specific applications.

A uni-directional coupler is an optical device used in fiber optic communication systems to couple optical signals from an input fiber to one or more output fibers. It can realize functions such as distribution, merging and splitting of optical signals. The working principle of a uni-directional coupler is based on the coupling effect of light. It achieves specific optical coupling effects by precisely controlling the geometry and refractive index distribution of the optical fiber.
