A data diode is hardware device that is often called a 'unidirectional security gateway'. It is placed between two networks with different levels of security and controls the flow of information. A data diode is a cybersecurity solution that makes sure that information can only travel in one direction.

A unidirectional gateway, similar to a data diode, is a cybersecurity solution that allows data to flow in one direction only. It is often used to protect critical systems from cyber threats. The rise in the complexity and frequency of cyber threats has heightened concerns about the security of critical infrastructure and sensitive systems. Unidirectional gateways provide an effective defense mechanism by ensuring that data can only flow in one direction, preventing unauthorized access and data breaches.

The Global Info Research report includes an overview of the development of the Unidirectional Gateways industry chain, the market status of Government (Regular Unidirectional Gateway, Ruggedized Unidirectional Gateway), Aerospace & Defense (Regular Unidirectional Gateway, Ruggedized Unidirectional Gateway), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Unidirectional Gateways.
