Unified Endpoint Management (UEM) Software is a class of software tools that provide a single management interface for mobile, PC and other devices. It is an evolution of, and replacement for, mobile device management (MDM) and enterprise mobility management (EMM) and client management tools. UEM software enables companies to remotely supervise business data, licenses, applications, usage, and security on a multitude of devices, such as desktops, mobile phones, tablets, wearables, and IoT devices. UEM software also allows employees to add their own mobile devices to the platform, enabling secure Bring Your Own Device (BYOD) policies.

The industry trend of UEM software is expected to grow rapidly in the coming years, as more businesses adopt remote work and IoT applications. The main drivers for the market growth are the increasing demand for security and compliance, the rising adoption of BYOD policies, the proliferation of IoT devices, and the need for centralized management of endpoints. The challenges faced by the market include the lack of awareness and expertise, the complexity of integration with existing systems, and the privacy concerns of users.

The Global Info Research report includes an overview of the development of the Unified Endpoint Management (UEM) Software industry chain, the market status of Large Enterprises (Cloud-based, Web-based), SMEs (Cloud-based, Web-based), and key
