## Abstracts

The global Uniform-sized Polystyrene Latex Particles market size is expected to reach \$ 259 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032).

Uniform-sized polystyrene latex particles are spherical polymer microspheres made of polystyrene with a highly controlled and narrow particle size distribution. They are typically produced via emulsion polymerization techniques, resulting in monodisperse particles dispersed in an aqueous medium. Owing to their excellent size uniformity, stable morphology, and surface modifiability, these particles are widely used as standard reference materials, functional carriers, and model systems in analytical, biomedical, and materials science applications. In 2025, global Uniform-sized Polystyrene Latex Particles production reached approximately 4035 kg, with an average global market price of around US\$40000 per kg. The production capacity for Uniform-sized Polystyrene Latex Particles in 2025 was approximately 4200 kg. The typical gross profit margin for Uniform-sized Polystyrene Latex Particles between 20% and 40%.

This report studies the global Uniform-sized Polystyrene Latex Particles production, demand, key manufacturers, and key regions.
