A universal grinder is a machine tool belonging to the cylindrical grinder family that allows a single machine to perform a wide range of rotary grinding operations with a high degree of versatility and flexibility. Therefore, as a unique feature of a universal grinder, the grinding wheel head and the headstock of the workpiece can be rotated freely during external grinding, and the angle can be changed at will, providing a wide working range. In addition to external grinding, the machine can also be used for internal grinding, taper grinding, and end-face grinding.

Universal Grinder is a versatile and widely used machine in the manufacturing industry for grinding various materials such as metals, plastics, ceramics, and composites. The global market for universal grinders is driven by the increasing demand for precision grinding in industries such as automotive, aerospace, and electronics.

One of the key factors driving the growth of the universal grinder market is the increasing adoption of automation and advanced technologies in manufacturing processes.
