Abstracts

According to our (Global Info Research) latest study, the global Universal Polystyrene Solid Supporter market size was valued at US\$ 41.88 million in 2025 and is forecast to a readjusted size of US\$ 56.28 million by 2032 with a CAGR of 4.2% during review period.

Universal Polystyrene Solid Supporter refers to a standard-grade polymer support widely used in solid-phase synthesis, serving as a stable platform for immobilizing initiating groups and enabling stepwise coupling reactions. It is commonly applied in the synthesis of oligonucleotides, selected peptides, and other small molecules. Unlike modified or pre-loaded supports, universal polystyrene supporters are not functionalized with specific nucleosides and instead focus on consistent loading capacity, reliable swelling behavior, uniform particle size distribution, and mechanical robustness, making them suitable for process development, scale-up validation, and standardized commercial production. Upstream supply mainly consists of styrene monomers, crosslinkers, initiators, and related polymerization, classification, and basic surface-treatment reagents and equipment. Downstream customers primarily include oligonucleotide CDMOs, nucleic acid drug developers, synthesis reagent manufacturers, and research-oriented solid-phase synthesis users. Commercial opportunities are driven by the steady expansion of nucleic acid therapeutics and molecular diagnostics, as well as sustained demand from customers seeking cost-efficient and supply-stable solid supports. On an ex-works basis, effective global capacity for universal polystyrene solid supporters in 2025 is estimated at approximately 3,800 kg, with sales volume of about 3,180 kg and a weighted average ex-factory price of around USD 12.8 per gram. Owing to their relatively standardized specifications, gross margins for this segment typically range from 30% to 45%, lower than those of

modified or pre-loaded supports but supported by stable, scalable demand.
