Abstracts

According to our latest research, the global Unmanned Aerial Survey Service market size will reach USD 6141 million in 2031, growing at a CAGR of 5.0% over the analysis period.

Unmanned aerial surveying resolves many of the traditional issues with manned operations. In particular, UAVs are now being utilized heavily in agriculture, real estate, utilities, construction, filmmaking, and even law enforcement. UAVs can fly lower than manned vehicles, thereby allowing them to take the place of both manned aerial surveys and, in some cases, ground crews as well. This reduces the necessity for consolidating information between different companies. Because UAVs can travel lower to the ground, they also complete aerial surveying with greater detail, allowing for more accurate results.

As the technology improves and federal regulations ease, aerial surveying is steadily moving away from manned aerial surveying teams and towards unmanned aerial vehicles (UAVs). UAV technology has advanced to the extent that it is faster, safer, easier, and more affordable than manned aerial surveying for many use cases.
