According to our (Global Info Research) latest study, the global Unmanned Aerial Vehicle Battery market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Unmanned Aerial Vehicles are prominently used for better cross-border surveillance to enhance military intelligence, communication, and border security.

Currently, most UAVs rely on lithium polymer (Li-Po) or lithium-ion (Li-ion) batteries because of their high energy density and high charge and discharge rate capacity. However, the growing need for improved endurance in UAVs with enhanced flight range has propelled several UAV manufacturers to opt for solar technology as the primary source of power in UAVs. The UAV manufacturers are increasingly shifting towards the development of solar-powered UAV drone, which will positively aid in this market's growth during the forecast period. Such drones offer a sustainable way to provide goods and services to remote areas quickly and effectively, which is similar to satellites. Also, these solar-powered UAVs are being increasingly used in the agricultural sector for monitoring climate change and environmental effects and in delivery services.
