## Abstracts

According to our (Global Info Research) latest study, the global Unmanned Aerial Vehicles (UAVs) market size was valued at USD 6672.7 million in 2023 and is forecast to a readjusted size of USD 16380 million by 2030 with a CAGR of 13.7% during review period.

An unmanned aerial vehicle (UAV) is an aircraft without a human pilot on board and a type of unmanned vehicle.

In 2022, the global UAV market will reach USD 6,485 million, and it is expected to reach USD 16,628 million in 2029, with a compound annual growth rate (CAGR) of 14.3%. With continuous breakthroughs in key technologies such as wireless charging, visual obstacle avoidance, gesture control, 5G communication, and integrated chips, the performance of drones will be greatly improved. Portable, easy to operate, long battery life, and autonomous response will become the main features. The speed of 5G is 250 times faster than the current LTE network standard connection speed, and its development will improve the connection speed of drones; high-performance chips integrating wireless communication, sensor integration and spatial positioning can make drones Able to obtain the same processing power as a personal computer. In addition, the integration trend of cutting-edge technologies such as artificial intelligence and virtual reality and drones is becoming more and more significant, and the consumer experience will gradually improve. Applying VR technology to the drone, the user can change the camera angle by simply turning the head, and then cooperate with the remote control to control the drone, and the picture captured by the drone can be displayed in real time in front of the user's eyes at the first time. It can provide users with a new operating experience from the perspective of virtual reality.
