## Abstracts

The global Unmanned Autonomous Mining Vehicle market size is expected to reach \$ 7482 million by 2032, rising at a market growth of 8.9% CAGR during the forecast period (2026-2032).

Autonomous mining vehicles refer to mining vehicles that integrate autonomous driving, environmental perception, intelligent decision-making, precise positioning, and vehicle-cloud collaborative control technologies in a mining environment. They are capable of independently completing tasks such as transportation, loading and unloading, driving, and obstacle avoidance with minimal or no human intervention. These vehicles primarily include unmanned mining trucks, loaders, and auxiliary transport vehicles. They can achieve continuous, safe, and efficient operation under complex working conditions in open-pit or underground mines, and are key equipment for promoting smart mine construction, reducing labor costs, and improving operational safety and transportation efficiency.

The autonomous mining vehicle industry chain mainly consists of three segments: upstream core technologies and key components, midstream vehicle manufacturing and system integration, and downstream mining applications and operations. The upstream segment includes key components such as lidar, millimeter-wave radar, cameras, high-precision positioning and navigation systems, automotive-grade chips, controllers, drive-by-wire chassis, electric drive and braking systems, and communication modules. The midstream segment consists of manufacturers of unmanned mining trucks and other mining vehicles, as well as integrators of autonomous driving software, scheduling and control platforms, and vehicle-cloud collaborative systems, responsible for vehicle development, system integration, and delivery. The downstream segment mainly comprises open-pit and underground mining companies, which deploy unmanned

transportation and centralized dispatch systems to achieve safe, intelligent, and large-scale operation of mining transportation.

The average price of unmanned autonomous mining vehicles is projected to be US\$1 million per vehicle by 2025, with sales reaching 4,003 units. The total production capacity of unmanned autonomous mining vehicles is estimated at 5,500 units, with a gross profit margin of approximately 23%.
