According to our (Global Info Research) latest study, the global Unmanned Ground Vehicles market size was valued at USD 3673 million in 2023 and is forecast to a readjusted size of USD 7814.4 million by 2030 with a CAGR of 11.4% during review period.

An unmanned ground vehicle (UGV) is a vehicle that operates while in contact with the ground and without an onboard human presence.

UGVs are vehicles that operate in contact with the ground with or without human intervention. The main application of UGVs is in the Defense sector. UGVs have sensors to observe the environment and the terrain in order to either navigate autonomously or as per the instructions of a human operator. UGVs are used to examine the ground, to supply ammunition to soldiers during combat, to carry out rescue operations during disasters, and to detect explosives and to detonate them.
