According to our (Global Info Research) latest study, the global Unmanned Logistics Vehicles in Parks market size was valued at US\$ 2367 million in 2025 and is forecast to a readjusted size of US\$ 9963 million by 2032 with a CAGR of 23.1% during review period.

Unmanned Logistics Vehicles in Parks refer to Level 3/L4 autonomous cargo vehicles and tractors operating within relatively controlled or semi-enclosed roads in industrial parks, logistics parks, factory areas, campuses, and campus-based airports/ports. They are used for tasks such as material handling, warehousing and transshipment, inter-station distribution, and towing. These vehicles typically feature 24/7 operation, vehicle-road collaboration/cloud management platform access, and automated loading and unloading/docking platforms. These vehicles come in various configurations, including small delivery vehicles, box-type RoboVans, autonomous tractors, and on-site electric tractors.

The global market for unmanned logistics vehicles in parks is experiencing rapid expansion, driven by advances in AI perception, low-speed autonomous driving platforms, and smart infrastructure deployment. These vehicles are increasingly utilized for material handling, intra-logistics transport, and last-mile distribution within controlled environments such as industrial parks, logistics hubs, factories, airports, and campuses. Key market drivers include labor cost reduction, 24/7 operational efficiency, and integration with cloud-based fleet management systems. As hardware costs continue to decline and regulatory frameworks mature, the industry is transitioning from pilot testing toward large-scale commercial deployment, marking a significant step toward the automation of on-site logistics and urban smart mobility ecosystems.
