According to our (Global Info Research) latest study, the global Unmanned Sea Systems market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Unmanned sea systems are remotely controlled or pre-programmed autonomous water vehicles. They are mainly classified into two: unmanned surface vehicles (USVs) and unmanned underwater vehicles (UUVs). Globally, the Navy uses unmanned sea systems for underwater mapping missions, surveillance, and as surface targets during naval exercises or to clear naval mines.

The increasing number of investments in maritime surveillance capabilities is expected to drive the unmanned sea systems market growth until the end of 2023. These investments enable the defense industry to incorporate more technological advancements into the production segment to ensure successful combat operations. It has been observed that several defense agencies are investing in surveillance capabilities also to enhance the combat and surveillance capabilities of their naval platforms. In addition, one of the market's trends in the defense industry is the increasing adoption of next-generation sensors, which are smaller in size, weight, and consume less energy. The naval platforms are integrated with electro-optical (EO) and IR sensors to provide better visibility with greater range during the day and ensure superior surveillance capability during day and night respectively. Furthermore, maritime surveillance applications highly require unmanned sea systems that drive the rate of investments in the development of next-generation unmanned sea systems.
