According to our (Global Info Research) latest study, the global Unmanned Systems Tactical Communication market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Unmanned Systems Tactical Communication usually operate over IP networks, giving them the security and flexibility of IP communications. The technology requires large amounts of processing power, which can make SWaP (size, weight and power) issues a challenge for UAVs and other space-constrained unmanned systems. Range and visibility can be affected by obstacles such as tall buildings and trees, which is an especially problematic for ground-based systems such as UGVs (unmanned ground vehicles).

The Global Mobile Economy Development Report 2023 released by GSMA Intelligence pointed out that by the end of 2022, the number of global mobile users would exceed 5.4 billion. The mobile ecosystem supports 16 million jobs directly and 12 million jobs indirectly.

According to our Communications Research Centre, in 2022, the global communication equipment was valued at US\$ 100 billion. The U.S. and China are powerhouses in the manufacture of communications equipment. According to data from the Ministry of Industry and Information Technology of China, the cumulative revenue of telecommunications services in 2022 was ?1.58 trillion, an increase of 8% over the previous year. The total amount of telecommunications business calculated at the price of the previous year reached ?1.75 trillion, a year-on-year increase of 21.3%. In the same year, the fixed Internet broadband access business revenue was ?240.2 billion, an increase of 7.1% over the previous year, and its proportion in the telecommunications business revenue decreased from 15.3% in the previous year to

15.2%, driving the telecommunications business revenue to increase by 1.1 percentage points.
