According to our (Global Info Research) latest study, the global Unplasticized Polyvinyl Chloride (UPVC) Windows market size was valued at USD 15530 million in 2023 and is forecast to a readjusted size of USD 20600 million by 2030 with a CAGR of 4.1% during review period.

UPVC windows are un-plasticized, as no additive is added to make the material flexible. UPVC is a thermoplastic material with rigidity and significant modulus of elasticity. Several years of R&D has made UPVC the most sophisticated substance available as a building material for doors, windows, shutters, automobile body parts, and even credit cards. It is frequently referred to as rigid PVC.

The growing demand for energy-efficient windows is estimated to be one of the major factors that having a positive impact on the growth of the market. Customers are increasingly looking for windows with ENERGY STAR rating. These windows ensure that the energy performance of their buildings satisfies the new building code standards. The changes in building code in several countries such as Canada will further boost the demand for ENERGY STAR windows. This in turn, drives the replacement demand from high-rise commercial buildings. Consequently, to improve the energy performance of their buildings, constructors are adopting unplasticized polyvinyl chloride windows.
