According to our (Global Info Research) latest study, the global Unshielded AC Power Cord market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Unshielded AC power cord is a kind of power cord, also known as ordinary power cord or universal power cord. Compared with shielded power cords, unshielded power cords do not have electromagnetic shielding capabilities, and there is no metal shielding layer outside to block external interference signals. The unshielded AC power cord is mainly composed of two wires, usually two copper core wires, one is the live wire (or phase wire) of the power supply, and the other is the neutral wire. This type of power cord is often used in low-power, low-frequency electronic equipment, such as home appliances, computer peripherals, audio, etc.
