The global Unshielded AC Power Cord market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Unshielded AC power cord is a kind of power cord, also known as ordinary power cord or universal power cord. Compared with shielded power cords, unshielded power cords do not have electromagnetic shielding capabilities, and there is no metal shielding layer outside to block external interference signals. The unshielded AC power cord is mainly composed of two wires, usually two copper core wires, one is the live wire (or phase wire) of the power supply, and the other is the neutral wire. This type of power cord is often used in low-power, low-frequency electronic equipment, such as home appliances, computer peripherals, audio, etc.

This report studies the global Unshielded AC Power Cord production, demand, key manufacturers, and key regions.
