Abstracts

According to our (Global Info Research) latest study, the global Unshielded Data Cable market size was valued at US\$ 2135 million in 2025 and is forecast to a readjusted size of US\$ 3247 million by 2032 with a CAGR of 6.2% during review period.

In 2025, global Unshielded Data Cable production reached approximately 2.59 million kilometers , with an average global market price of around US\$0.8 per meter.

Unshielded data cable generally refers to a data transmission cable without metallic shielding, with unshielded twisted pair (UTP) cable being the most common type. It is widely used in local area networks, structured cabling, data centers, security systems, and industrial communication. The cable typically consists of multiple pairs of insulated copper conductors twisted together at controlled pitches and covered with PVC, LSZH, or PE jackets. The twisted-pair structure helps reduce electromagnetic interference and crosstalk. Compared with shielded data cables, unshielded data cables offer lower cost, easier installation, better flexibility, and simpler maintenance, although their interference resistance is weaker in high-EMI environments. Therefore, they are mainly suitable for offices, residential networks, commercial buildings, and general industrial communication systems.

The upstream of the unshielded data cable industry chain mainly includes suppliers of copper conductors, insulation materials, jacket compounds, flame-retardant materials, fillers, and packaging materials, with copper being the key cost driver. Representative raw material suppliers include Freeport-McMoRan, BHP, Rio Tinto, Jiangxi Copper, Aurubis, Dow, BASF, and LyondellBasell. The midstream consists of data cable manufacturers responsible for wire drawing, insulation extrusion, pair twisting, cabling,

jacket extrusion, testing, and packaging. Representative companies include Coroflex, Phoenix Contact, Norden Communication. Downstream applications include telecom operators, data centers, smart buildings, security surveillance, industrial automation, education and healthcare facilities, and residential networks, with typical end users such as China Mobile, China Telecom, AT&T, NTT, Amazon Web Services, Microsoft, Google, Equinix, Foxconn, Siemens, and Honeywell. Overall, the industry chain is characterized by “copper and polymer materials driving cost, manufacturing processes determining transmission performance, and digital infrastructure investment driving demand.”

The unshielded data cable market is currently mature but still supported by stable demand, with office networks, residential broadband, security surveillance, smart buildings, and small-to-medium data centers remaining the main application areas. Competition is gradually shifting from pure price competition toward transmission stability, fire rating, installation convenience, and brand certification. In the future, demand will continue to be supported by digital infrastructure development, Wi-Fi access point deployment, PoE applications, surveillance camera upgrades, and smart building renovation, while Cat6 and Cat6A products are expected to gain a larger share and low-end Cat5e products may see limited growth. Key restraints include copper price volatility, low-price homogenized competition, partial substitution by optical fiber in long-distance transmission, and the replacement effect of shielded cables in high-interference industrial environments. Overall, unshielded data cable is unlikely to be a high-growth breakout market, but its low cost, easy installation, and broad compatibility will allow it to maintain stable demand in general structured cabling and short-to-medium-distance data transmission applications.
