According to our (Global Info Research) latest study, the global Unshielded Power Inductor market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

An Unshielded Power Inductor is a passive electronic component that stores energy in a magnetic field when electrical current flows through it. Unlike shielded inductors, which have a magnetic shield to contain and direct the magnetic field, unshielded inductors do not have such a shield. This lack of shielding means that the magnetic field can spread beyond the inductor, potentially leading to interference with nearby components.
