According to our (Global Info Research) latest study, the global Unvented Cylinder market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

An unvented cylinder refers to a type of hot water storage system commonly used in residential and commercial buildings to provide pressurized hot water for various domestic and heating purposes. Unlike traditional vented hot water cylinders, unvented cylinders operate under mains water pressure, eliminating the need for a cold-water storage tank in the loft or attic. These systems are designed to provide high-pressure hot water flow directly to taps, showers, and other hot water outlets throughout the building.

There was a growing demand for energy-efficient heating and hot water solutions in both residential and commercial buildings, leading to the adoption of advanced unvented cylinders with improved insulation, temperature control, and energy-saving features.
