According to our (Global Info Research) latest study, the global Upper Arm Electronic Blood Pressure Monitor market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Upper arm electronic blood pressure monitors are more suitable for home use. It is less difficult to operate than a mercury sphygmomanometer, and unlike finger and wrist sphygmomanometers, which suffer from poor accuracy. The advantage of the upper arm sphygmomanometer is that the cuff compresses the brachial artery of the upper arm, making it easier for the arm measuring blood pressure to be parallel to the right atrium.
