## Abstracts

The global Upper Arm Electronic Blood Pressure Monitor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Upper arm electronic blood pressure monitors are more suitable for home use. It is less difficult to operate than a mercury sphygmomanometer, and unlike finger and wrist sphygmomanometers, which suffer from poor accuracy. The advantage of the upper arm sphygmomanometer is that the cuff compresses the brachial artery of the upper arm, making it easier for the arm measuring blood pressure to be parallel to the right atrium.

This report studies the global Upper Arm Electronic Blood Pressure Monitor production, demand, key manufacturers, and key regions.
