Abstracts

The upper extremity is the region in a vertebrate animal extending from the deltoid region up to and including the hand, including the arm, axilla and shoulder.

SCOPE OF THE REPORT:

This report studies the Upper Extremities market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Upper Extremities market by product type and applications/end industries.

One of the primary drivers for this market is the gradual rise in the incidence of accidental injuries. It has been observed that the cases of injuries especially road traffic injuries are increasing over the last decade. Consequently, road accidents can lead to injury in upper extremity regions, which requires bone repair products to fix it. Another significant cause of injury in upper extremity is observed in sports injuries. Sports injuries can lead to injury in the hand and wrist, which involve complex treatment procedures as it involves both the skeleton and soft tissues. It can lead to a complex tear in the dorsal and palmar radioulnar ligaments and fracture in the carpal, which are common sports injuries. Such growing incidences of accidental injuries (road accidents and sports injuries) can increase the need for upper extremity products such as bone repair and soft tissue fixation devices, which in turn will propel the growth of the global upper extremities market during the forecast period.

The global Upper Extremities market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.

North America, especially The United States, will still play an important role which cannot be ignored. Any changes from United States might affect the development trend of Upper Extremities.
