Abstracts

The global Uranium Conversion and Enrichment market size is expected to reach \$ 2876.2 million by 2030, rising at a market growth of 5.3% CAGR during the forecast period (2024-2030).

According to statistics from the 2017 WNA Nuclear Fuel Report, the production capacity of uranium hexafluoride, a major international uranium conversion supplier, is 52,600 tU (UF₆)/a, and the actual estimated total production is 41,800 tons. According to UxC statistics, the secondary supply volume in the global market in 2018 was approximately 35,000 tons.

The nuclear fuel cycle is complex. It begins with the mining of uranium. Then it must undergo mining and grinding, conversion, enrichment and fuel manufacturing steps before it can be used in a nuclear reactor. Finally, the nuclear waste removed from the reactor must undergo temporary storage, reprocessing and recycling, and steps such as waste disposal.

This report studies the global Uranium Conversion and Enrichment production, demand, key manufacturers, and key regions.
