The global Urban Intelligent Public Toilet Management System market size is expected to reach \$ 1362 million by 2032, rising at a market growth of 9.8% CAGR during the forecast period (2026-2032).

The Urban Smart Public Toilet Management System is a comprehensive system that integrates IoT sensors, video/passenger flow monitoring, environmental monitoring equipment, and a cloud platform onto urban public toilet infrastructure. It provides unified digital management of 'people flow, environment, equipment, and cleaning.' It typically includes: real-time monitoring of toilet stalls/people flow, odor/temperature/humidity/ammonia concentration monitoring, consumable supply monitoring (paper towels, hand sanitizer), linked control of door locks, ventilation, and lighting, cleaning staff check-in and work order distribution, and a management platform and mobile app for urban management or property management. Through data visualization and early warning mechanisms, the system can promptly detect problems such as blockages, severe odors, and low consumable supply levels. It intelligently schedules cleaning and maintenance shifts, optimizes energy consumption and operating costs, and provides citizens with services such as toilet navigation and toilet stall occupancy status queries, achieving refined, intelligent, and transparent management of urban public toilets.
