Urea Melamine Formaldehyde Molding Compound is a thermosetting plastic based on a blend of urea-formaldehyde and melamine-formaldehyde resins, combining the easy processability of urea-formaldehyde resin with the superior properties of melamine-formaldehyde resin. It exhibits high heat resistance, chemical resistance, electrical insulation, mechanical strength, and surface hardness, along with good wear resistance, arc resistance, and self-extinguishing properties. This material is commonly used in the production of electrical components (such as switches and sockets), tableware, decorative laminates, and high-temperature industrial parts. Due to its high gloss, easy-clean properties, and scratch resistance, it is widely used in products requiring aesthetics and durability.
