## Abstracts

Urethane-lined rollers are rollers covered with a thick layer of urethane.

Lining is a surface treatment in which the surface is covered with a material such as resin. Urethane-lined rollers use urethane rubber to line the metal inside the rollers, preventing metal-to-metal contact in conveyor systems and preventing wear and tear on the roller fittings.

Urethane is resistant to abrasion caused by friction. Therefore, urethane-lined rollers can be expected to function effectively over a long period of time and have a long service life. In addition, urethane's elasticity and moderate flexibility allow it to absorb shock and protect the goods being transported.

However, urethane is generally sensitive to low and high temperatures. When used in extreme temperature environments, the performance and life of urethane linings may be affected.

According to our (Global Info Research) latest study, the global Urethane Lined Roller market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
