Abstracts

According to our (Global Info Research) latest study, the global Urethane Mining Products market size was valued at US\$ 1492 million in 2025 and is forecast to a readjusted size of US\$ 2288 million by 2032 with a CAGR of 6.2% during review period.

In 2025, global Urethane Mining Products production reached approximately 25,000 tons, with an average global market price of around 58,000 US\$/ton.

Urethane Mining Products refer to a series of high-performance elastomer products specifically designed and manufactured for the mining industry, made from polyurethane (PU) materials with excellent wear resistance, impact resistance, corrosion resistance, and flexibility. These products cover a wide range of components used in mining operations, including screen panels, conveyor belts, roller sleeves, liners, wear parts, seals, and vibration isolation components, which are customized to adapt to harsh mining environments such as high friction, heavy impact, and corrosive media. They effectively replace traditional metal or rubber products, reducing equipment wear, extending service life, lowering maintenance costs, and improving the safety and efficiency of mining operations, serving as essential supporting components for mineral extraction, transportation, and processing.

The market demand for Urethane Mining Products maintains steady growth, driven by the global expansion of mining activities, the increasing emphasis on mining equipment efficiency and safety, and the continuous upgrading of mining technology, creating broad business opportunities. Demand is primarily fueled by large-scale mining enterprises (coal, metal ore, non-metallic ore) for equipment wear parts replacement and new equipment matching, as well as the need to reduce operational costs and

improve production efficiency; additionally, the trend of green mining and equipment lightweight further boosts the demand for high-performance, environmentally friendly urethane products. Business opportunities lie in R&D of high-wear, high-impact urethane formulations to adapt to extreme mining environments, developing customized products for different mining scenarios (coal mining, metal mining), optimizing production processes to reduce costs, and establishing long-term cooperation with mining equipment manufacturers and mining enterprises to tap into the after-sales replacement market and emerging mining regions.
