## Abstracts

A urinal is a sanitary plumbing fixture for urination only, predominantly used by males. It can take the form of a container or simply a wall, with drainage and automatic or manual flushing, or without flush water as is the case for waterless urinals.

### SCOPE OF THE REPORT:

This report focuses on the Urinals in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The increased focus on public infrastructure development worldwide is a key growth factor for this market. With increasing awareness about sustainable buildings combined with the need to conserve water, washrooms have become one of the most important areas of focus for construction, especially with the surfacing of concepts such as waterless urinals or toilets. However, any restroom, whether conventional or sustainable, is redundant without fixtures and fittings such as sanitary wares, showers, bidets, faucets, and water closets. Construction projects are rising worldwide which, in turn, is likely to trigger a demand for urinals during the forecast period.

APAC is expected to become contributor of urinals market during the forecast period as a result of the increased investments in the development of new public infrastructure in countries such as India and China. Upcoming events such as the Gold Coast Commonwealth Games (2018) to be held in Brisbane, Australia will attract investments for sports infrastructure during the forecast period, which in turn, will drive market growth in this region.

The worldwide market for Urinals is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017,

according to a new GIR (Global Info Research) study.
