The global Urinary Catheters market size is expected to reach \$ 2468 million by 2032, rising at a market growth of 2.4% CAGR during the forecast period (2026-2032).

In urinary catheterization a latex, polyurethane, or silicone tube known as a urinary catheter is inserted into a patient's bladder via the urethra. Catheterization allows the patient's urine to drain freely from the bladder for collection. It may be used to inject liquids used for treatment or diagnosis of bladder conditions. A clinician, often a nurse, usually performs the procedure, but self-catheterization is also possible. The catheter may be a permanent one (indwelling catheter), or an intermittent catheter removed after each catheterization.

A urinary catheter is a tube placed in the body to drain and collect urine from the bladder.

Global Urinary Catheters key players include Teleflex, Bard Medical, ConvaTec, WellLead, etc. Global top four manufacturers hold a share over 15%.

China is the largest market, with a share over 20%, followed by USA, and Europe, both have a share over 40 percent.
