## Abstracts

The global Urinary Leg Bags & Systems market size is expected to reach \$ 1464 million by 2032, rising at a market growth of 4.9% CAGR during the forecast period (2026-2032).

Urinary Leg Bags & Systems are medical urination devices used to collect urine from patients and are secured to the leg for mobility and daily activities. They are typically connected to a catheter (Foley catheter, external catheter, etc.) and consist of a collection bag, drainage tube, check valve, drain valve, and leg strap securing system. This system primarily addresses the challenges faced by long-term catheterized patients, including inability to urinate independently, limited mobility, nighttime urination needs, and difficulties in urine management in hospitals and homes. It allows patients to maintain privacy, comfort, and hygiene during mobility, walking, and rehabilitation. Urinary leg bags enable long-term catheterized patients to maintain mobility while achieving safe, discreet, and hygienic urine management. The average price of this product is approximately \$2.50 per unit, with global sales of approximately 411 million units.
